Hiring Manager

AMD

1 Commerce Valley Drive East

Markham, ON L3T 7X6

Dear Hiring Manager,

I am excited to apply for the Machine Learning/Artificial Intelligence Intern/Co-op (Short-Term 2026) position at AMD. My enthusiasm for GPU-accelerated machine learning began when I discovered how AMD's ROCm platform and MI300X accelerators are redefining AI performance through open, high-efficiency computing. As a graduate student in Applied Machine Intelligence at Northeastern University, I am passionate about optimizing algorithms that connect mathematical theory with real-world impact and AMD's software-hardware co-design approach perfectly aligns with that drive.

During my time as a Web Developer at Aeropres India Private Limited, I played a key role in developing a project called Atom Storage, building secure, full-stack applications using React.js, Node.js, and RESTful APIs to automate internal workflows. To balance quality and speed in a small, fast-paced team, we introduced short end-of-day review sessions where we analyzed progress, identified bugs, and resolved blockers before morning stand-ups. This proactive approach improved system reliability by 15%, reduced bug-resolution time by 20%, and strengthened our ability to deliver high-quality software on tight deadlines, skills I am eager to bring to AMD's fast-moving AI initiatives.

Collaboration has always been central to how I work. In our team, we maintained daily check-ins to clarify roles, share challenges, and help one another overcome roadblocks. This open communication built trust, kept priorities aligned, and ensured smooth project delivery. Those experiences taught me that strong teamwork, grounded in transparency and empathy, is just as critical to innovation as technical excellence, something I see reflected in AMD's culture of collaboration and inclusion.

What draws me most to AI/ML at AMD is the intellectual satisfaction of connecting mathematics, algorithms, and hardware efficiency. I am fascinated by how ROCm's open-software stack enables optimization of matrix multiplications, precision tuning, and model deployment on heterogeneous architectures. Working at AMD would allow me to apply my growing expertise in Python, TensorFlow, and PyTorch to help advance the frontier of AI acceleration while learning from some of the best minds in the field.

I would welcome the opportunity to discuss how my technical foundation, analytical mindset, and collaborative spirit align with AMD's mission to push the boundaries of intelligent computing. Thank you for your time and consideration.

Sincerely,

Dhrumil Khalas
